Guide to Run Sneaker Tracker

Ours venv(virtual environment) folder is in our project; however, it is recommended to have own venv since we have an individual virtual environment.

Requirements:

1. Python 3.x then create virtual environment
2. Python Libraries:
   > Dash-extensions,
   > dash-bootstrap-components,
   > plotly,
   > pandas,
   > wordcloud,
   > os.path

Requirements:

Create python virtual environment: python -m venv env

Then install missing packages: pip install <required packages above>

Then Run from app.py
